To the Organizing Committee of the Summer School on Mathematical and Conceptual Aspects of Quantum Theory 2018,

Centro de Ciencias Matemáticas, Morelia, UNAM

I have the pleasure to extend the following recommendation letter in favor of **Hodek García Tavera**.

Hodek is a young and diligent student who is finishing his undergraduate studies at the Mexico's National University (UNAM). He started working under my supervision very recently on a project that intends to put some bounds on possible violations of the Einstein's Equivalence Principle using atomic systems. Eventually we will extend this project in order for him to complete a dissertation for obtaining his physics diploma (equivalent of a Bachelor's degree in science).

During his undergraduate studies Hodek has taken several courses on General Relativity and related areas, and he's eager to pursue his graduate studies on subjects that overlaps several branches of gravitational physics. Therefore he's very excited in attending the Summer School.

Without any doubt this can be a great experience for Hodek, both academic and personal, which in addition can help him to have a bird's-eye view of the current problems and challenges on quantum theory.

In summary, I strongly support his application for the School.

In case you require additional information do not hesitate in contact me.

Sincerely

Dr. Marcelo Salgado

Associate Professor, Institute for Nuclear Sciences, UNAM
